

Environmental brokerage services

About us

An historical but dynamic company in step with the times, Boz IMEX operates as dealer/broker in the environmental field: our services range from international trade of ferrous and metal scrap – in which we boast fifty years of experience – to custom-made solutions for the collection of hazardous and non-hazardous waste, to be allocated for recovery or disposal.

Our operational headquarters are located in **San Vito al Tagliamento**, in the **north-east of Italy**, in a strategic position for logistical connections with **central-eastern Europe** (in addition to Italy, our company is present in Central-Eastern Europe in an area that extends from Austria to Romania, from Poland to Serbia), close to important international ports such as **Venice, Trieste and Rijeka**.

Boz IMEX employs an experienced and multilingual work team (we communicate also in English, German, Hungarian, Croatian, Serbian and Romanian, in addition to Italian, of course). Our philosophy involves both the use of modern web communication channels and a constant presence in the area as well, thanks to some trusted sole representatives cooperating with us.

Precisely in order to operate on the territory to better seize the opportunities and give our interlocutors a feeling of “proximity”, two foreign branches have been established, namely in Croatia (BOZ IMEX S.A.S. *Glavna podružnica Rijeka*, 2018) and Romania (BOZ IMEX S.A.S. DI BOZ RENATO & C. SAN VITO AL TAGLIAMENTO SUCURSALA BUCURESTI, 2021).

Thanks also to the implementation of a **Management System according to the ISO 9001:2015 standards**, we aim to represent a reliable, professional and competent partner through focused and effective solutions, in a short time and at competitive prices: every day we undertake to increase the level of our services in order to achieve customers' loyalty.

Our brokerage services

Services for the steel industry

Procurement of ferrous scrap

For almost fifty years, we have been procuring the raw materials able to satisfy customers' requirements, whether they produce steel for constructions (rebars, meshes, sheets, tubes...) or semi-finished products for more specific application areas, such as automotive, energy, mechanics, furniture, household appliances (wire rod, wire, rolled flats).

Financial coverage

Thanks to consolidated partnership with leading financial institutions (banks, factors, insurance companies) and our financial strength we are able to offer various reliable solutions on the subject of payments.

The range of our services covers the whole procedure for waste export in full accordance with current legislation, from the preliminary verification of the environmental licenses of all involved parties up to the certification of the recovery and / or disposal of the waste in an environmentally sound manner, including organization of the logistics through long-time carriers and arrangement of transport documents.

Logistics

Our constant presence across the key locations, together with consolidated relationship with a wide range of logistics operators, allows us to choose between different transport means (road, road, sea) and between various delivery terms (Incoterms®) looking for the combination that best satisfies our customers.

The service-pack also covers the fulfilment of the documents and procedures required for the shipment of materials, as well as the tracking the goods from departure to destination, sending relevant info to the Customer, the supplier and any other parties involved in the shipment.

Services for recovery/ recycling plants

Our long-time experience gained abroad allowed us to develop a network of contacts with several European plants: for this reason, as dealer/ broker regularly enrolled in the Italian Register of Environmental Operators, we are able to offer good opportunities and solutions to recovery/ recycling plants for the export of hazardous and non-hazardous waste and subsequent recovery (energy or material) rather than disposal.

Waste management services

Boz IMEX provides a range of services that allow public and private customers not to worry about the management of their waste, in total safety and in full compliance with the environmental regulations in force.

Our services are designed and planned for a custom-made solution to the specific waste management problem, from the placement (or supply) of the most suitable equipment according to the specific waste treated (press-container, container, dumpster, big-bags, barrels...), to the identification of the most appropriate destination for each material (dumps, incinerators, recycling plants...), up to the logistics management.

This package can be enhanced with some optional value-added services, such as environmental consulting, support for chemical analysis, support in compiling the waste register and environmental declarations, support for management (removal and disposal) of waste contaminated by asbestos.

Demolitions

We also deal with the demolition of industrial plants and metal structures, both small and large.

Our service includes the preliminary inspection, in order to assess extent and type of intervention; the draft of the operational plan and related methods; the actual fulfilment of each phase in cooperation with specialized partners who are equipped to carry out any required activity; the collection of all different types of waste materials to be sent to respective recovery or disposal operations.
